SQL Express will be installed, should the 'Local Stand-alone Installation' be chosen as the Setup Type.

ARGUS Development Budget version 2.0.009 Known Issues

The following are known issues and their work-arounds.

Known Issues

Issue	Work-Around
Source data summary is not being calculated properly when the project doesn't end as whole months and has a different month ending date	Use Whole Months for projects
Application Error when duplicating a 'deleted' record by second User	Be aware that records deleted by one user cannot be duplicated
Report snapshot data not updating to reflect the new changed values if user has not made changes in worksheet	Snapshot updates depend on the user changing a value to run the update. If an update is based on a calculation change, the snapshot data will not update.
In Analysis Form, 'Save View As -> Public' does not mark the new view as public	Analysis views cannot be marked as 'Public'
When a worksheet is exported to Excel, all Negative numbers are not displayed as specified under view menu	Be aware that negative numbers may show differently in Excel than they do in the Worksheet
Worksheet column position not preserved after changing view	Column positioning may change when changing view

Modifications to ARGUS Development Budget SQL Database

Only one change has been introduced to ARGUS Development Budget SQL database to the CSContingFundTrnsfr table to allow easier identification for Contingency Transfer records to the Project and Worksheet. A utility has been provided to upgrade your databases to the latest version. This utility is installed with the application, and is in the ARGUS Development Budget program directory, called "ADB Database Upgrade.exe". Run this application by double-clicking it, select the database to upgrade from the list (if applicable), and click the 'Update Database' button. Databases that are not upgraded will show a warning message if users try to log in to it.
